

Changing Human Reproduction.

Chance – Choice – Design

Human reproduction has developed from a matter of chance to a matter of choice to a matter of design as a result of rapidly advancing reproductive technologies. The University Research Priority Program (URPP) “Human Reproduction Reloaded | H2R” explores these profound changes in reproductive behavior by investigating their opportunities, risks and limitations. The program takes a broad view of new technologies in the field of assisted reproduction, such as gene editing, social egg freezing or germ cell donation. We are looking at not only their medical but also their societal, ethical and legal implications.

Our transdisciplinary and multi-method URPP brings together researchers from six faculties as well as from various disciplines of the humanities, social, medical and natural sciences.

SUB-PROJECTS

SP 1: Normativity of Human Reproduction

Prof. Dr. Ulrike Babusiaux
ulrike.babusiaux@rwi.uzh.ch

Prof. Dr. Thomas Gächter
thomas.gaechter@rwi.uzh.ch

SP 2: Human Reproduction in Societies and Markets

Prof. Dr. Katja Rost
rost@soziologie.uzh.ch

Prof. Dr. Ulrike Ehlert
u.ehlert@psychologie.uzh.ch

SP 3: Ethnography of Human Reproduction and Single Case Studies in Threshold Areas

Prof. Dr. Tanja Krones
tanja.krones@usz.ch

Prof. Dr. Annuska Derks
annuska.derks@uzh.ch

SP 4: CRISPR Technology in Human Reproduction

Prof. Dr. Brigitte Leeners
brigitte.leeners@usz.ch

Prof. Dr. Gerald Schwank
schwank@pharma.uzh.ch
